

## *Concept Connect Advanced*

### Overview

Configure One offers a powerful technology that allows its customers to easily and quickly connect *Concept™* to their existing business applications. Configure One's *Concept Connect Advanced* module reduces the effort, time, expense, and risk associated with data integration.

*Concept Connect Advanced* allows distinct, non-compatible application systems to exchange data or "talk to each other". Graphical tools, scripting facilities, and Java extensions eliminate the need for thousands of lines of hard-to-maintain custom code to perform integration between *Concept* and other applications.

### Key Features

- Fully integrated data mapping tool allows incoming messages to be easily converted to necessary format
- Supports industry standard protocols such as HTTP, HTTPS, MQ Series, FTP and TCP/IP
- Fully configurable framework allows developers to build complex integrations that meet their unique requirements
- Extensible framework allows users to deploy custom developed business objects
- Message delivery failsafe for guaranteed data delivery and recoverability
- Graphical interface enables users to build and configure integrations easily
- Full-featured operations panel allows easy management of integrations
- Supports file transfers between any two databases on disparate systems
- Full support for a wide range of data formats, including XML
- Full reference guide to assist users in creating their own integrations

### Business Benefits

*Concept Connect Advanced* is a completely standards-based product that provides an open, scalable foundation with the utmost flexibility to accommodate changing business requirements in the future.

- Simplifies integration process by centralizing all product integration points
- Minimizes time and monetary investment for version upgrades
- Allows new technological strategies and initiatives to fit rapidly and seamlessly into existing core IT architecture
- Allows broader customer and product reach through rapid integration of new touch points
- Wide protocol support allows easy integration into any network
- Improves inter-system communication and data sharing

## Support for a wide range of communication protocols

- TCP / IP
- Serial / Asynch
- File
- File Set
- FTP
- LU 6.2
- MQ Series
- HTTP / HTTPS
- User Configured

## Support for a wide range of data formats

- XML
- Fixed
- Variable
- Hierarchical
- EDIFACT (EDI Standard)
- X12 (EDI Standard)

## Supported Routing Functionality

*Concept Connect Advanced* enables data mapping, routing, and translation from a source format to a target format, configurable through a point-and-click interface.

- Point-to-Point: From one source to one destination
- One-to-Many: From one source to multiple destinations and in multiple translations
- Many-to-One: From multiple sources to be consolidated for a single destination
- Many-to-Many: Multiple sources translated and routed to multiple destinations
